

Scenario: Jonathan

Jonathan is a junior computer science student at UNC Charlotte. He wants to get into a cyber security job but doesn't know exactly what he is looking for. Jon has some projects in his portfolio but feels finding some work experience would really help him fill out his resume

Jonathan begins asking around to try and find resources to learn more about possible internships. His friend tells him about the Student Success Finder app. When he gets home he downloads the app on his phone.

Once he makes an account and enters his desired field, he chooses to learn more about different types of jobs that may interest him. Jon decides he wants to be a security analyst. He uploads his resume to Student Success Finder and begins to browse for internships in his area. He selects his location and begins applying. A few weeks later he gets a call back for an interview in a large tech company.

Jonathan's Story:

As a student I want to find an internship to supplement my computer science degree so that I can gain experience in the workplace.

Feature List:

- The ability to create user accounts
- Information about entry level positions in all computing fields
- A internship search page with filters for location and sector
